

# Galvanized NAILS...?

**NOT WITH CEDAR SIDING!**

Rustic beauty deserves  
the right fastener.

## THE PROBLEM HIDING INSIDE "GALVANIZED"

Cedar naturally contains tannins—acidic compounds found in the wood itself.

When those tannins react with the zinc coating on galvanized nails, a chemical reaction begins.

*And eventually...*

**BLACK STREAKS**  
START RUNNING  
DOWN THE SIDING.

*Doesn't look  
so good later.*

What began as  
gorgeous cedar  
can end up with  
dark staining  
beneath every  
fastener point.

## THE SOLUTION USE STAINLESS STEEL NAILS.

Stainless fasteners resist the tannin reaction entirely, helping preserve the clean natural beauty of cedar for years to come.

- ✓ No black streaking.
- ✓ No ugly bleed marks.
- ✓ Just clean rustic character.

## ONE STOP SHOP at Congleton

We stock stainless steel fasteners specifically recommended for cedar applications, so when you stop in for siding materials, you can grab everything in one trip.

 **CONGLETON**  
LUMBER & DESIGN CENTER  
*A higher standard.*
